

Head, Respiratory Biology

Groundbreaking opportunity to discover and develop ventilatory control medicines

Galleon Pharmaceuticals, located in suburban Philadelphia, is building a world-class team of scientists focused on creating a portfolio of novel medicines for use in patients with diseases that have an abnormal ventilatory control component. Our products will have potential applications in sleep medicine, pulmonary, neurological and cardiovascular diseases, anesthesiology and pediatrics conditions.

We are seeking an experienced Ph.D.-level scientist (pharmacologist, biochemist or cell biologist) with extensive pharmaceutical industry experience (>5 years) to build a high-quality biology team focused on the discovery and progression of potential therapeutics for ventilatory control dysfunction. Expertise and experience in the respiratory area is preferred. A track-record of innovation, risk-taking and effectively managing, motivating and developing a scientific group is essential. The individual and their team will develop new *in vitro* and *in vivo* systems - as well as employ currently available ones - to assess the impact of compounds on ventilatory control. This position requires high levels of scientific curiosity, a drive and passion to create novel medicines, and strong communication and inter-personal skills to effectively engage with the world's top scientific experts in this research area, and to work across the matrix within the company. This individual will be expected to contribute significantly to the development and implementation of the Galleon's short-term and longer-term vision and strategy.

This is a rare, ground-floor opportunity at a pharmaceutical company that is creating novel medicines in several therapeutic areas of high unmet medical need, has excellent financial backing and fosters a culture of innovation, empowerment, delivery and personal development for all staff.

Send cover letter and resume to:

Douglas W.P. Hay, Ph.D.
Senior Vice President, Drug Discovery
Galleon Pharmaceuticals, Inc.
